

CASE STUDY

CHALLENGES

- Global Infrastructure
- Sophisticated User Population
- Multiple IDP sources
- Continuously remote business

Technology companies often face a diverse set of challenges given the level of different technologies used for business operations. Being a software company, Collibra has many diverse constituents to please. The security group strives to maximize the efficiency of all employees, doing this with a completely remote user population can introduce many challenges. Additionally, given how fast the company is growing and the myriad of investment areas, the funds for security solutions are relatively limited.

RESULTS

- Reduced time of investigations from hours to minutes
- Provided additional visibility into multi-factor authentication adoption
- Validated compliance to corporate policy
- Maintained audit and traceability

SOLUTION

Using the Oort platform Collibra was able to more effectively deploy multi-factor solutions and easily measure the level of adoption and compliance. Additionally the platform delivered a greater level of understanding for the user population and its relationship with the organization.

The CISO of Collibra, Myke Lyons, says "it has been a great partnership. We have been working back and forth with the [Oort] team and they have helped us be much more efficient as well as reducing the risk we face."

WE LEVERAGE OORT TO ENSURE WE ARE MAINTAINING OUR COMPLIANCE AROUND SPECIFICALLY MULTI-FACTOR AUTHENTICATION. WE CAN ALSO GAIN A BETTER UNDERSTANDING OF OUR VARIOUS IDENTITIES IN THE SYSTEMS WE USE.

AS AN AGGREGATOR WE'RE GETTING A LOT OF BENEFIT OUT OF OORT, BRINGING DATA IN AND ALLOWING US TO REALLY SHORTEN THE TIME TO DO WHAT WE NEED TO DO

DURING AN INVESTIGATION

MYKE LYONS
CISO, COLLIBRA
